

Brief Overview

Our participation aims to unveil the latest technologies in the fields of property management, facilities management, parking management and traffic solutions. The purpose is to improve customer service and achieve operational efficiency.

Leading the Future Innovations: Discover tomorrow's technologies for better customer services

In the fields of property management, facilities management, parking management and traffic solutions, QDVP (Mawaqif Qatar) created an innovative lab to innovate and implement more technologies to improve customer services, and reduce the cost to Landlords, using data analytics, chat bots, and smart dashboards.

All our solutions have been digitally certified and highly secure, with more groundbreaking innovations to be presented at the upcoming Web Summit Qatar 2025:

- Digital enforcement and traffic solutions;
- Chat bots for customer services;
- Mobility solutions for fleet management;
- EcoWheels for electric cars;
- Online access control management;
- Smart navigations for properties;
- Ai driven facility management;
- Extended digital payment options;
- And many innovative solutions.

During this prestigious Web Summit, we will showcase to the visitors all the emerging solutions and demonstrating that we are the operator of tomorrow for large scale facilities.

Awarded by Green Apple international organization for environmental protections, our technologies will also reduce paperwork, as well as reduce carbon emissions for a better climate.

Furthermore, the focus is how to increase the revenues to Landlords, while maintaining the optimal cost of operations (less staff, less inventories, better life cycle, predictive maintenance, happy customers, etc.), with the best service levels.

QDVP (Mawaqif Qatar) has been established in Qatar since 2011, stemming from a joint venture between Qatari Diar and VINCI Grand Projects, both leading corporations changing lives.
