Diyar Launches NEBRAS AI 2.0 and Showcases D-Agentic at Web Summit Doha 2026

Doha, Qatar, Web Summit Doha 2026

Diyar Middle East, a leading digital transformation and system integration provider in the GCC and wider region, announced the launch of NEBRAS AI 2.0 and the showcasing of its emerging agentic platform, D-Agentic, during its participation at Web Summit Doha 2026. Diyar is ISO 42001 certified, reflecting its commitment to responsible AI governance and internationally recognized AI management standards.

NEBRAS AI 2.0 represents a major upgrade to Diyar's established AI platform, which has been deployed across organizations in the GCC to support enterprise knowledge mining, intelligent recommendations, multimedia processing, and system integrations. The latest version expands these capabilities with enhanced embedded AI agents designed to accelerate insights, boost productivity, and support smarter decision making at scale.

Alongside the NEBRAS AI 2.0 launch, Diyar will be showcasing D-Agentic, an advanced agentic platform built to enable task driven AI agents that orchestrate data, workflows, and policies across departments. The platform supports complex evaluations, strengthens governance and compliance, and improves operational efficiency across functions such as procurement, legal, finance, HR, IT, and specialized operations.

Both platforms are built with security, governance, and responsible AI principles at their core, ensuring controlled AI behavior, auditability, and alignment with enterprise and regulatory requirements.

Visitors to Diyar's booth at Web Summit Doha 2026, **Stand E127,** can experience live demonstrations showcasing how NEBRAS AI 2.0 and D-Agentic are helping organizations deploy secure, scalable, and responsible AI solutions.
