Genspark Launches AI Workspace 2.0 as It Crosses $100M ARR and Tops off $300M Series B

- *Introduces AI Workspace 2.0, an integrated suite of AI-powered tools including Speakly (an AI voice keyboard), custom workflow automation, slide generation, and media creation to enhance professional workflows*
- *Surpasses $100M in ARR in nine months, driven by rapid enterprise adoption across consulting, advertising, and other knowledge-driven industries*
- *Expands global operations to support enterprise customers adopting autonomous execution at scale*

PALO ALTO, Calif. – Genspark today announced the launch of AI Workspace 2.0, the next evolution of its all-in-one AI workspace designed to put busywork on autopilot. Instead of prompting repeatedly, stitching tools together, or manually formatting outputs, users describe the outcome they want, and Genspark's agents coordinate execution end-to-end across slides, media, email, and voice. Genspark is sharing this announcement at Web Summit Qatar, highlighting how autonomous execution is becoming the default work layer for teams.

The launch comes amid the company's rapid momentum. Genspark has surpassed $100 million in annual run rate (ARR) within 9 months and has closed a $300 million Series B funding round, marking one of the fastest growth trajectories in the AI industry.

AI Workspace 2.0: What's New

AI Workspace 2.0 evolves from a simple observation: modern work is fragmented across tools, drafts, and handoffs, and execution has become the bottleneck. Instead of managing prompts and stitching outputs together, teams describe the outcome they want, and Genspark coordinates execution end-to-end.

AI Workspace 2.0 introduces major upgrades across Genspark's core creation and productivity tools. Speakly, a new macOS and Windows voice-to-text application, generates clean, formatted writing in real time, triggers agents by voice, and supports enterprise use with zero data retention. AI Inbox 2.0 automates repetitive email tasks such as triage and bulk cleanup through custom workflows. AI Slides Creative Mode transforms a simple prompt into an artistic, presentation-ready deck. AI Media Agents enable teams to produce finished images, videos, audio, and music assets.

"Genspark has built an all-in-one AI Workspace where agents don't just assist, they autonomously plan and execute to deliver finished outcomes across voice, inbox, and creation tools," said [Eric Jing](#), CEO and co-founder of Genspark. "Surpassing $100M in ARR in just nine months is proof that this is quickly becoming the default way modern knowledge workers get work done. That demand is exactly why AI Workspace 2.0 matters: it makes the leap from creation capabilities to operational autonomy, turning email into automated workflows with AI Inbox, bringing a true desktop voice entry point with Speakly, and delivering major upgrades to slides, images, and video."

Enterprise Adoption and International Expansion

Since the launch of [Genspark for Business](#) (Team Plan and Enterprise Plan) in late November, more than 1,000 organizations across consulting, advertising, and other industries have begun using the AI

Workspace platform and achieving tremendous ROI. This rapid early traction indicates growing enterprise demand for AI that can be deployed as a default work layer across teams, shifting from isolated experimentation to standardized, repeatable workflows that can scale.

As adoption of AI Workspace accelerates globally, Genspark is expanding operations to support customers across North America, Europe, and Asia. Today, the company officially announced its expansion into Japan to better serve local organizations.

Genspark has already established a local team with dedicated customer support and customer success resources in Japan and plans to continue expanding hiring over the coming quarters. This expansion will help Japanese customers reduce manual work while maintaining the precision, quality, and operational rigor required for production-ready execution across core workflows. For one example, teams at ADK Marketing Solutions Inc., a top marketing and advertising agency in Japan, have achieved approximately an 80% reduction in data analysis and document creation workloads with Genspark over the past few months.

About Genspark
Genspark is a Palo Alto, CA-based technology company building agentic AI for more than one billion global knowledge workers. Founded by veterans from Microsoft, Google, Meta, YouTube, and Pinterest, and backed with $460 million total funding by investors including Emergence Capital Partners, LG, SBI, UpHonest, and Temasek's Pavilion Capital, Genspark orchestrates 70+ state-of-the-art AI models to transform business objectives into finished deliverables – from board-room presentations and financial models to client-ready documents, full-stack web applications, mobile apps, and more. Empowered by partnerships with OpenAI, Anthropic, AWS, Microsoft, and many other industry leaders, Genspark serves both individual users and enterprise clients worldwide. Built for knowledge workers who lead, not just act. Learn more at genspark.ai.
