

# Regulynx Launches the First Fully Arabized RegTech Platform for GCC Regulatory Compliance!

## Description

Regulynx announces the launch of the first fully Arabized RegTech platform designed to interpret Arabic legislation and operationalize GCC regulations.

## Press Release Body

**Doha, Qatar — Announced at Web Summit Qatar 2026** — Regulynx today announced the launch of the first fully Arabized regulatory compliance platform built specifically to interpret and operationalize Arabic legislation across the GCC.

Regulynx enables financial institutions and regulated organizations to translate complex local regulations into practical compliance requirements, internal policies, and control frameworks — natively in Arabic, with full bilingual support in English. The platform is designed to reflect how regulators in the GCC draft, publish, interpret, and enforce laws and supervisory expectations.

Unlike traditional compliance tools developed primarily for Western regulatory environments, Regulynx is purpose-built for the Middle East. It is the first RegTech platform to be fully Arabized across its entire compliance lifecycle: from Arabic source legislation → to regulatory obligations → to policies, controls, and compliance reporting.

At the core of the platform is a verified regulatory rule library derived directly from Arabic source law, ensuring legal traceability, accuracy, and auditability. Regulynx also features an AI-powered regulatory assistant (“RegBot”), automated policy and control mapping, and real-time compliance dashboards aligned with regional supervisory practices.

“Most compliance platforms treat Arabic law as an afterthought or a translation problem,” said *Chantal Felter-Zeegelaar*, CEO at Regulynx. “Regulynx has been built from the ground up as a GCC-native and fully Arabized RegTech platform. Besides English, we enable institutions to move directly from Arabic legislation to operational compliance, with confidence, clarity, and speed.”

The launch of Regulynx marks a major milestone in regional RegTech innovation and aligns with Qatar’s broader vision to strengthen regulatory infrastructure, financial sector resilience,

and digital transformation. By providing a GCC-native compliance operating system, Regulynx aims to reduce regulatory friction, improve transparency, and enhance compliance maturity across regulated industries.

Regulynx is currently engaging with financial institutions, telecom operators, and regulated enterprises across Qatar and the wider GCC. Pilot programs are underway, with early adopters using the platform to assess regulatory obligations, generate policies, and monitor compliance status in real time.

## **About Regulynx**

Regulynx is the first fully Arabized, AI-powered regulatory compliance platform built for the GCC. It helps regulated organizations interpret Arabic legislation, map regulatory obligations to policies and controls, and monitor compliance status in real time. Regulynx supports Arabic, English, and Dutch and is designed to meet the specific needs of financial institutions and regulated entities across the Middle East and Europe.
